5. I sat: DC current (A) that will cause Lo to drop approximately 30%.
6. The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions. Circuit design, component placement, PWB trace size and thickness, airflow and other cooling provisions all affect the part temperature. Part temperature should be verified.

### Characteristic Curve (2R2)

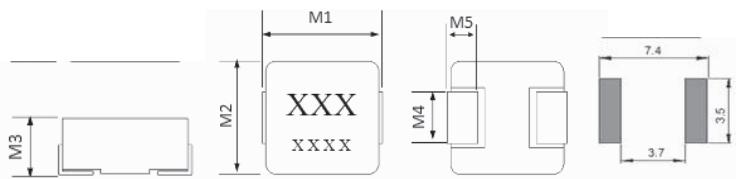

1. Test Freq: 100 KHz, 0.5V
2. All test data is referenced to 25°C ambient.
3. Operating Temperature Range: -55°C to +125°C.
4. Rated Current: DC current (A) that will cause an approximate  $\Delta T$  of 40°C.
5. I sat: DC current (A) that will cause Lo to drop approximately 30%.
6. The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions. Circuit design, component placement, PWB trace size and thickness, airflow and other cooling provisions all affect the part temperature. Part temperature should be verified.
